## UIIP for Pharmaceutical Science students

### Chan Sheng You (Class of 2022)

“The internship allowed me to gain insight into the inner workings and operations of a major pharmaceutical company and allowed me to experience meeting the different expectations of the multiple departments while working in cross-functional teams.”

### Soh Eng Hong (Class of 2022)

“My time in AstraZeneca has been very fruitful and productive because the Regulatory Affairs department gives me many opportunities to learn and contribute to the company. Some of the work in this function ranges from preparing technical dossiers for submission to the Health Sciences Authority (in response to post approval variations) to diligently managing the documentation of Standard Operating Procedures, most of which directly helps the company.”

### Gan Ke Ching (Class of 2022)

“Through my internship, I’ve gained greater exposure to the role of medical affairs, including clinical trial coordination as well as cross-functional and commercial activities. I’ve also had the exciting opportunity to be in the midst of significant developments in asthma indication and severe asthma medication at AstraZeneca!”

### Neo Mei Qi (Class of 2022)

“Despite only been here for 2 months as of yet, the experiences I’ve had in AstraZeneca was nothing short of amazing and fruitful. It provided a different perspective from school and also a platform to explore all the aspects of a prominent bio-pharmaceutical. It was truly a blessing to be given this opportunity and I can’t wait to learn more.”
